

School Programs: Close Encounters

\$250 / 30 students + 3 chaperones / 30 minutes / includes animal encounter

Animal Groups

Is it a mammal, reptile, bird or amphibian? During this program students will explore how scientists classify animals into different groups.

Adaptations

What is camouflage? Why do animals sleep during the day and are most active at night? This program will reveal the physical and behavioral adaptations that animals use to survive.

Habitats

From the rainforests of Africa to the deserts in Australia and the frozen snow and ice in Antarctica, explore the different habitats that animals call home.

Life Cycles

Investigate how animals are born, the way they grow up, and which ones care for their young.

Food Chains

Join us as we compare predator vs prey and connect the links within the food chain.
